

Policy Statement

Energy and Greenhouse Gas Emissions

Mick George Limited recognises that all aspects of its operations consume energy.

We are committed to being as efficient as reasonably practicable in our use of natural resources in order to minimise both our impact on the environment and our energy expenditure.

We will monitor and measure energy use across all sites and offices and the energy use of our vehicle fleet to quantify consumption and identify significant and abnormal energy use.

We will ensure that sufficient resource is available to review and analyse the energy usage data to identify where further efficiencies can be identified and to provide baseline information to set objectives against.

We will raise awareness of energy efficiency throughout our employees and continue to train all our drivers in efficient driving techniques and monitor and incentivise them to reduce their energy expenditure.

We will consider the implications of our procurement decisions at an early stage and endeavour to purchase energy-efficient products and services, considering lifecycle information, to facilitate energy performance improvement within the business.

We will comply with all applicable legal requirements related to energy use, consumption and efficiency and will review the recommendations of our ESOS audit to establish any practical measures that can be implemented.

This policy will be made available to our employees, those working for or on behalf of MGL and provided on request to any other interested parties. The policy will be reviewed annually, subject to changes in company procedure or legislation.

Signed:

Managing Director
